

Assignment 2 Part 1 Instructions

Assignment Instruction

<https://github.com/SeattleTestbed/docs/blob/master/EducationalAssignments/UndoPartOne.md>

Important

1. Your security layer should produce no output!!!
2. Remember that filenames can only contain lowercase letters and numbers.
3. Your reference monitor should be named as 'reference_monitor_[netid].r2py', e.g., if your netId is 'abc123', the name should be: 'reference_monitor_abc123.r2py'.
4. Do not make any changes to the code that sets up variable hiding (the code at the end). Changing this will be considered as cheating.

Rubric

- +20 turning in a file in the correct format
- +20 file obeys assignment directions with respect to efficiency
- +60 determined by number of students whose attack code bypasses your security layer
